

What to do if Face ID login isn't working

When trying to log in with Face ID (facial recognition), you may see messages like the ones shown below. This means the Face ID login attempt has failed. In that case, follow the steps below.

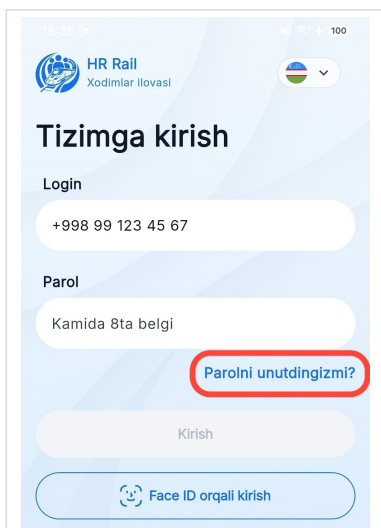

Important: the phone number used for login must be the same as the phone number linked to your Telegram account (and to the @hrmpro_robot bot). Otherwise, the one-time code (OTP) sent by the bot will not reach you, and you won't be able to reset your password.

Follow these steps:

1

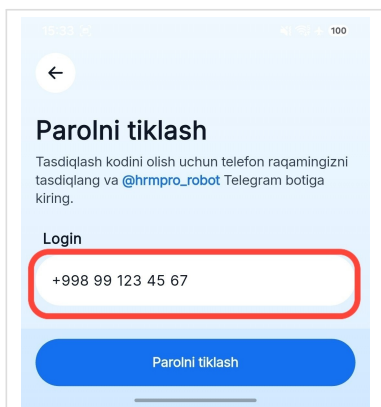

Try logging in with your username and password

If Face ID isn't working, enter your username and password on the login screen. If you don't remember your password, tap “Parolni unutdingizmi?” (Forgot password?).

2

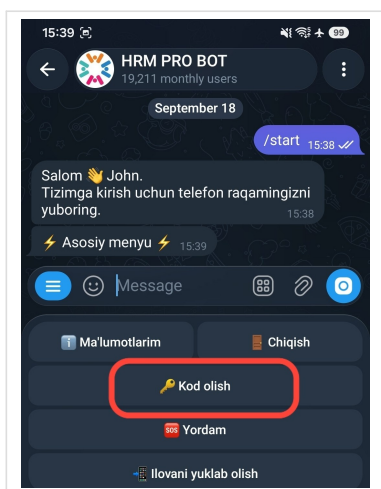

Confirm your phone number

On the “Parolni tiklash” (Reset password) screen that opens, check the phone number shown as your login and tap “Parolni tiklash”. This will redirect you to the @hrmpro_robot Telegram bot.

3

In the @hrmpro_robot bot, tap “Kod olish”

Open the @hrmpro_robot bot in Telegram (send /start if needed) and tap “Kod olish” (Get code) in the main menu. This bot is where you get your one-time verification code (OTP).

4

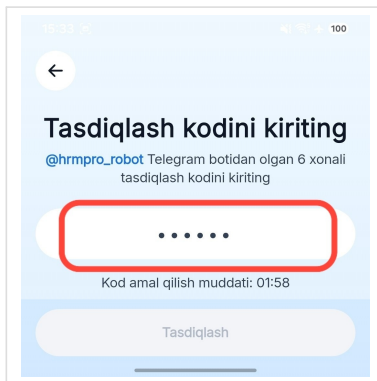

Copy the one-time code (OTP) sent by the bot

The bot will send you a 6-digit verification code. The code is valid for only 2 minutes, so copy it or note it down right away.

5

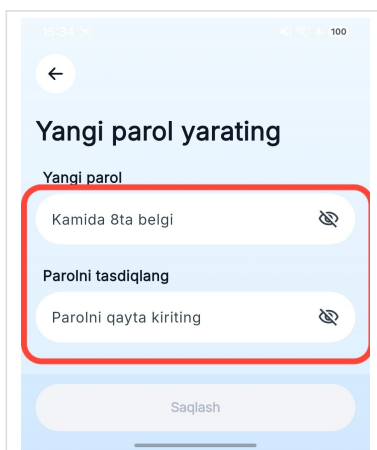

Go back to the app and enter the code

On the “Tasdiqlash kodini kiriting” (Enter verification code) screen, enter the 6-digit code you received from the Telegram bot.

6

Create a new password

On the “Yangi parol yarating” (Create new password) screen, enter your new password, confirm it, and tap “Saqlash” (Save). You can now log in with this username and your new password.

7

If the problem persists, contact the HR department

If none of the steps above help, please contact the HR department.
